Download VirtualBox

Here you will find links to VirtualBox binaries and its source code.

VirtualBox binaries

By downloading, you agree to the terms and conditions of the respective license.

VirtualBox 7.0.14 platform packages

- [Windows hosts](#)
- [macOS / Intel hosts](#)
- [Linux distributions](#)
- [Solaris hosts](#)
- [Solaris 11 IPS hosts](#)

The binaries are released under the terms of the GPL version 3.

See the [changelog](#) for what has changed.

You might want to compare the checksums to verify the integrity of downloaded packages. *The SHA256 checksums should be favored as the MD5 algorithm must be treated as insecure!*

- [SHA256 checksums, MD5 checksums](#)

Note: After upgrading VirtualBox it is recommended to upgrade the guest additions as well.

VirtualBox 7.0.14 Oracle VM VirtualBox Extension Pack

- [All supported platforms](#)

Support VirtualBox RDP, disk encryption, NVMe and PXE boot for Intel cards. See this [chapter](#) from the User Manual for an introduction to this Extension Pack. The Extension Pack binaries are released under

Welcome to VirtualBox!

The left part of application window contains global tools and lists all virtual machines and virtual machine groups on your computer. You can import, add and create new VMs using corresponding toolbar buttons. You can popup a tools of currently selected element using corresponding element button.

You can press the **F1** key to get instant help, or visit www.virtualbox.org for more information and latest news.

Virtual machine Name and Operating System

Please choose a descriptive name and destination folder for the new virtual machine. The name you choose will be used throughout VirtualBox to identify this machine. Additionally, you can select an ISO image which may be used to install the guest operating system.

Name: Windows 98SE

Folder: C:\Users\HOME\VirtualBox VMs

ISO Image: C:\Users\HOME\Downloads\Microsoft Windows 98 Second Edition\Windows 98 Second Edition.iso

Edition:

Type: Microsoft Windows

Version: Windows 98

☐ Skip Unattended Installation

OS type cannot be determined from the selected ISO, the guest OS will need to be installed manually.

Microsoft Windows 98 Setup

Welcome to Setup.

The Setup program prepares Windows 98 to run on your computer.

- To set up Windows now, press ENTER.
- To learn more about Setup before continuing, press F1.
- To quit Setup without installing Windows, press F3.

Note: If you have not backed up your files recently, you might want to do so before installing Windows. To back up your files, press F3 to quit Setup now. Then back up your files by using a backup program.

To continue with Setup, press ENTER.

ENTER=Continue F1=Help F3=Exit F5=Remove Color

Auto capture keyboard ...

You have the **Auto capture keyboard** option turned on. This will cause the Virtual Machine to automatically **capture** the keyboard every time the VM window is activated and make it unavailable to other applications running on your host machine: when the keyboard is captured, all keystrokes (including system ones like Alt-Tab) will be directed to the VM.

You can press the **host key** at any time to **uncapture** the keyboard and mouse (if it is captured) and return them to normal operation. The currently assigned host key is shown on the status bar at the bottom of the Virtual Machine window. This icon, together with the mouse icon placed nearby, indicate the current keyboard and mouse capture state.

The host key is currently defined as **Right Ctrl**.
